

1.INTRODUCTION

The **COLLEGE WEBSITE** has been developed for our college - KHIT in an effort to make it as attractive and dynamic as possible. Compared to the existing site a database has been added to our project. The working of the project is as follows. The home page provides several links. The Home page contains several information about the site like campus, courses Offered, student corner, management, facilities, infrastructure etc.

The pages of websites can usually be accessed from a common root URL called the homepage, and usually reside on the same physical server. The URLs of the pages organize them into a hierarchy, although the hyperlinks between them control how the reader perceives the overall structure and how the traffic flows between the different parts of the sites.

A website requires attractive design and proper arrangement of links and images, which enables a browser to easily interpret and access the properties of the site. Hence it provides the browser with adequate information and functionality about the organization, community, network etc.

User Login module helps the user to login to the site. For that he must type the username and password correctly. The login provision in this page helps the already registered user to directly access the site and there is a link for registration to a user who is new to this site. Registration module helps the new user to register into the site. The information entered by the users is added into the table registration. In the Login link a student can login using the appropriate Username and password, through which he can able to access his attendance and marks. He can also view the Semester Results. The news & Notifications corner display the latest developments, announcements and events associated with the college activities.

2.LITERATURE SURVEY

2.1 EXISTING SYSTEM

The existing college website is static which makes it less interactive. It doesn't have database connectivity. Moreover, students didn't have an access to the details of the college through the site, hence they were not updated about the latest events and placement drives. Typically, such systems have static pages with minimal support for real-time updates and lack essential features like online admissions, course management, and student portals. Moreover, they are often not optimized for mobile devices, affecting the user experience.

2.2 PROPOSED SYSTEM

The **College Website** proposed system will include a dynamic and interactive website with modules for admissions, students, event management, student and faculty portals. The website will be responsive, ensuring accessibility across all devices and browsers. It will also incorporate modern web development technologies, focusing on security, usability, and performance.

3.PROPOSED WORK

3.1 Problem Statement

The existing college website does not meet the needs of its users due to limited functionality, lack of interactive features, and outdated design. There is a need to develop a comprehensive, responsive, and user-friendly platform that provides real-time information, academic resources, and easy communication channels.

3.2 Objectives

- To develop a modern, responsive website that meets the college's digital needs.
- To integrate dynamic features such as event management, online admissions, and user-specific portals.
- To create a scalable CMS that allows easy content updates and maintenance.
- To ensure data security and user privacy.

3.3 Methodology

1. Research and Analysis

Understanding the target audience is crucial. This involves both qualitative and quantitative research to gather insights about current users and potential visitors. Tools like Google Analytics can help analyze traffic data, while user groups or personas can be developed to tailor content and features to specific audience needs.

2. Planning

The planning phase includes defining the project goals, creating a sitemap, and developing wireframes. A sitemap provides a hierarchical view of the website's structure, helping to organize content effectively. Wireframes outline the layout of individual pages, ensuring that all elements are strategically placed for optimal user experience

3. Branding and Messaging

Establishing a consistent branding strategy is essential. This includes defining color palettes, typography, and visual elements that reflect the institution's identity. The messaging should resonate with prospective students and their families, focusing on what matters most to them

4. Design

In this phase, the visual aspects of the website are developed. Key considerations include:

- **User Interface (UI):** This involves selecting colors, fonts, and images that align with the brand.
- **User Experience (UX):** The design should facilitate easy navigation and access to information. Features like search bars and clear menus enhance usability.

5. Content Development

Content should be crafted with the target audience in mind. This includes not only text but also multimedia elements like videos and images that showcase campus life and academic offerings. A content calendar can help manage ongoing updates and blog posts

6. Testing and Launch

Before going live, thorough testing is essential to identify any issues related to functionality or user experience. This includes checking for broken links, loading speeds, and overall usability on various devices. Once testing is complete, the site can be launched

4.SYSTEM REQUIREMENT SPECIFICATION

4.1 Hardware Requirements

- **Operating System:** Windows 10.
- **Ram:** 4gb
- **Internet Connection**
- **Processor:** Multi-core processor
- **Storage:** SSD - 256gb

4.2 Software Requirements

- **Front - End:** HTML, CSS
- **Back - End:** PHP
- **Database:** MySQL
- **Style Sheet:** CSS
- **Hosting platform:** GitHub
- **Software:** XAMMP Software

4.3 Modules

- **Home Page Module:** Contains introduction, quick links, and featured sections. It provides a snapshot of the institution's identity, offerings, and key features while ensuring easy navigation to other pages. A well-designed home page module should be visually appealing, informative, and optimized for a seamless user experience.
- **Department Module:** Displays details about CSE academic department and external/useful links..This module helps students and visitors explore specific academic units within the college, understand the faculty structure, view courses offered, and learn about department-specific news and events.
- **Courses Module:** Offers detailed information on courses offered by different departments This module allows students, faculty, and visitors to browse, explore, and understand the curriculum, course structure, credits, and other essential details. It can also serve as a tool for students to plan their academic journey by providing a comprehensive overview of course requirements and electives.
- **Admissions Module:** Manages online applications and admission inquiries.This module provides prospective students with detailed information on the admission process, eligibility criteria, programs offered, important dates, and application procedures. This module helps guide students through the application process and serves as a one-stop destination for all admission-related queries. .
- **Student Module:** designed to provide a comprehensive portal for students to access academic information, manage their profiles, view grades, track their attendance, and stay updated on college activities etc.
- **Faculty Profile Module:** Displays a list of all faculty members by department.
- **Events and News Module:** Displays recent news, updates, and upcoming events.That helps in disseminating important updates, announcements, and alerts to students, faculty, and staff in a timely manner. This module ensures smooth communication by keeping the college community informed about events, deadlines, and other essential information.

- **Contact Us Module:** AdFacilitates easy communication between the college and its stakeholders.It should be well-organized and user-friendly, providing multiple channels to reach the institution and guiding users to the appropriate contact points.
- **ChatBot Module:** A Chatbot Module in a college website can provide instant support and assistance to students, faculty, and visitors by answering frequently asked questions, guiding through admission processes, sharing campus information, and providing contact details.

5.SYSTEM DESIGN

5.1 UML Diagrams: The UML diagram outlines the overall architecture and interaction between different components of the system. It includes use case diagrams, sequence diagrams, and class diagrams to illustrate

5.1.1Use Case Diagram:

A use case diagram will depict the interactions between users and the system, showcasing various functionalities like student registration, course enrollment, and faculty profile management.

Fig:5.1 Usecasediagram

5.1.2 Class Diagram:

The class diagram will represent the structure of the system, outlining classes, attributes and relationships between different entities like students, courses and departments.

Fig:5.2 Class diagram

5.1.3 Sequence Diagram:

The Sequence Diagram illustrates the flow of actions for typical operations, such as a student logging in and accessing course materials.

Fig:5.3 Sequence Diagram

6.IMPLEMENTATION

6.1 Coding: The college website is built using a combination of front-end and back-end technologies to create an interactive, responsive, and secure platform for students, faculty, and administrators. This section provides a detailed explanation of the coding structure and key components of the system.

About Us

Welcome to KHIT college website! We are a leading institution dedicated to providing high-quality education to our students. Our mission is to foster a community of learners who are equipped with the knowledge, skills, and values necessary to succeed in their chosen fields.

Our History

KHIT college was founded in 2010 with a vision to provide accessible and affordable education to the community. Over the years, we have grown and evolved to become one of the top institutions in the Guntur.

8.CONCLUSION

The college website design project has successfully achieved its primary objective of creating a comprehensive and user-friendly platform that caters to the needs of students, faculty, and administrators. The developed system provides a centralized digital space for managing academic resources, events, and announcements, streamlining communication within the college community.

The project integrates essential features such as user registration, course management, event updates, and role-based access control, ensuring that each user type has access to the appropriate functionalities. With a responsive design and a secure database, the website is accessible on various devices and protects user data with robust security mechanisms.

Throughout the development process, various technologies and tools, including HTML, CSS, JavaScript, and back-end programming with PHP/Python and SQL databases, were used. The project also adhered to software development best practices, ensuring modular code, proper documentation, and efficient database management.

It offers an intuitive interface for students to access learning resources and for faculty to manage courses seamlessly, ultimately fostering a more engaged and connected academic community.

9.FUTURE SCOPE

The college website design project lays a solid foundation for an efficient and interactive platform that serves the needs of students, faculty, and administrators. However, there are several enhancements and additional features that can be incorporated to further improve the website's functionality and user experience. The following are some future scope ideas for expanding and upgrading the project:

- Mobile Application Development
- Online Fee Payment Integration
- Enhanced college view in 3
- Student-Faculty Communication Portal
- Enhanced Reporting and Analytics
- Faculty Registration
- Community and Alumni Network
- Feedback and Grading System
- Integration with External Learning platform
